

City General Hospital — Internal Medicine

Discharge Summary · Demo only — synthetic data, not medical advice. No real PHI.

Patient: Rahul Sharma	MRN: RH-4471	DOB: 1974-02-03
-----------------------	--------------	-----------------

Admission

Admission date: 2021-08-05. Discharge date: 2021-08-09. Mr. Sharma, a 47-year-old man (at time of admission), was treated for community-acquired pneumonia and has recovered. Diabetes remained stable during the stay.

Hospital Course

Empiric antibiotics were started. On day 2 the patient developed an adverse drug reaction (see Allergy Review, page 2). Antibiotics were changed and the reaction resolved. He was discharged in stable condition with primary-care follow-up.

Discharge Medications

Metformin 500 mg twice daily (continued). Follow up with primary care.

Allergy Review

Page 2 · Allergy documentation · Demo only — synthetic data, not medical advice. No real PHI.

Documented Drug Allergy

Allergy: Penicillin. During this admission the patient developed a reaction to a penicillin-class antibiotic: **rash and breathing difficulty**. Severity: **severe**. Date recorded: 2021-08-06. Recorded by: Dr. A. Adams.

Clinical instruction: AVOID penicillin-class antibiotics (including amoxicillin, ampicillin) and review beta-lactam alternatives before prescribing.
